

Project name	Blurring CORCAN farm
Description	Blurring in many videos
Driver	McGill
Approver	@Abdoulaye Banire Diallo
Team	@Voncarlos Marcelo De Araújo
Client	McGill
Key outcomes	Model retrained with high-quality video samples; Performance validated in Corcan environment; No visible detection leakage in high-resolution test videos
KPIs	Blurring accuracy (>95%), one model to blur many different videos
Requirements	High-resolution video input
Risks	Delays in training, validation and test or missing data & person
Start date	2025-05-16
End date	2025-08-28
Strategic follow-up	Monthly
Project follow-up	Weekly, with UQAM members

Deliverables

Item	Delivery date
Instalation and Preparation Machine - Blurring V2	2025-05-16
Blurring model is applied person - Blurring V1	2025-05-26
Blurring model is applied person - Blurring V2	2025-06-18
Improving V2 - person and head blurring	2025-07-18
Blurring model is applied person - Blurring V3	2025-08-01
Improving V3 - person and head blurring with re-id tracking and improved dataset annotation	2025-08-20
Delivered Bluring V3	2025-08-28

The model training was conducted on the Compute Canada Cedar cluster using the dataset located at:

`/scratch/Blurring2025/Dataset_4_head_person/`

For pre-training, we utilized the **CrowdHuman dataset** available at:

`/scratch/Blurring2025/crowdhuman/`

Subsequently, fine-tuning was performed using our custom dataset stored in Dataset_4_head_person.

The complete implementation, including training and fine-tuning scripts, is available on GitHub:

https://github.com/bioinfoUQAM/Blurring_Person_CORCAN

We trained using yolov8, and you can run using the train_yolov8.sh in GitHub if necessary.
